1.7 Program Background and Context

The scope of the analysis includes the major program activities covered by the CDT's statutory mandate to protect the department from discrimination in employment, housing and public accommodations, and hate violence. The CDT receives, investigates, conciliates, and prosecutes complaints of alleged violations of the Equal Employment Opportunity Act, the Unruh Civil Rights Act, Disabled Persons Act, and Ralph Civil Rights Act. Violations of these statutes generally involve discrimination in employment, housing, public accommodations, and hate violence.

The CDT receives approximately 10,000 discrimination complaints per year. Employees generally initiate complaints in three ways: 1) The CDT Web site, 2) Phone calls to the CDT Communication Center, and 3) Submitting a written complaint. This proposal affects the processes for all three intake methods and the subsequent handling of all complaints. Half of all complainants immediately request the Right to Sue letter from CDT to seek redress in court. CDT investigates the remaining 10,000 complaints.

Within CDT there are three major business programs, and they are the subject of this business case analysis:

- 1. Enforcement Division
- 2. Dispute Resolution Division, and
- 3. Legal Division

The Enforcement Division is the investigatory arm of the Department. This division receives, investigates, conciliates and recommends for prosecution cases of employment and housing violations under the Equal Employment Opportunity Act (EEOA), housing and public accommodation violations under the Unruh Civil Rights Act (Unruh), denial of accessibility issues under the Disable Persons Act (DPA) and complaints alleging threats or acts of violence under the Ralph Civil Rights Act (Ralph). The complaint process allows for early resolution of matters through voluntary mediation. Should the investigation find sufficient evidence that a violation occurred, the matter is referred to the CDT Legal Division to explore mandatory mediation or, if applicable, issue civil action. The Enforcement Division is housed in all five CDT district offices (Sacramento, Rancho Cordova, and Vacaville). The division is managed by the Chief of Enforcement.

The Dispute Resolution Division (DRD) of the CDT provides confidential voluntary mediation services to parties whose complaints of discrimination are referred for mediation by the Enforcement Division. The DRD also mediates complaints of discrimination referred by the Legal Division for mandatory dispute resolution prior to filing a civil action in court. In all mediated cases, the DRD assists the parties to define issues of mutual concern, develop options, and find a mutually agreeable solution, which leads to closure of the CDT complaint. The DRD has staff in the Sacramento, Vacaville, and Rancho Cordova offices, and is managed by the Chief of Dispute Resolution.

The Legal Division advises the Enforcement Division staff, including reviewing cases for possible prosecution. In addition, the Legal Division engages in mediations and other forms of alternative dispute resolution, files and

prosecutes lawsuits, prepares and files legal briefs, and advises all other divisions of the Department on legal issues that arise in the day-to-day operation of the Department. Additionally, the Legal Division acts as in-house counsel representing the Department in administrative and civil complaints filed by employees and third parties against the Department. Finally, the Legal Division is responsible for the Compliance program and responds to Public Record Act (PRA) requests. The Legal Division staff is housed at Rancho Cordova and Sacramento offices. The division is managed by the Chief Counsel and an Assistant Chief Counsel in each office.

The Information Technology Services Division is responsible for supporting technology to run the CDT business operations.

The CDT complaint process includes basic jurisdictional screening before the complainant submits an inquiry, and the inquiry is submitted in accordance with what type of violation complainant is alleging (employment, housing, RALPH, UNRUH or Disabled Persons Act). The CDT investigator conducts an interview with each complainant, based on the information in the inquiry, and decides whether to proceed forward with accepting a complaint for investigation. Cases that are not in the Department's scope or jurisdiction are rejected; on rejected employment cases, the complainants are offered a complaint for filing purposes only. For accepted complaints, the investigator prepares a complaint for complainant's signature. Once a signed complaint is received, it establishes a filing date for the complaint. The complaint is then served on Respondent(s) via certified mail.

Before obtaining a formal response to the complaint from the Respondent, the investigator can refer the case to DRD for mediation or attempt a "Pre-Determination Settlement". If settled by DRD or an investigator, the case is closed.

If the case does not settle, an investigator investigates the alleged acts of discrimination, harassment, and/or retaliation to determine if the case has merit (i.e. a violation occurred). The investigator does so by obtaining and reviewing documents, interviewing witnesses, and potentially going on-site to review the location where the alleged act(s) occurred. If the investigator determines there is insufficient evidence or no probable cause to prove a violation of the law, the case is closed. The complainant can also elect to withdraw the case at any point in the investigation. Cases with merit are reviewed by an assigned staff counsel from the Legal Division who determines if the case should be referred to the Legal Division for possible filing of a civil complaint. Before filing the complaint, the Legal Division must refer the matter to the DRD for mediation. The DRD then assigns a mediator to conduct the mandatory mediation. If the mediation is successful, the Legal Division will monitor the terms of the settlement agreement, including payment of any monies owed and affirmative relief, and then will close the case once all terms of the settlement agreement have been satisfied. If the mediation is unsuccessful, the Legal Division does not file a civil complaint, the case will be closed. The litigation process continues until a judgment is issued or the case settles. Approximately 80% of cases are settled during the litigation process. If a settlement is not reached, the case goes to trial and a final judgment is made in civil court.

CDT utilizes current case management system (Destiny) to electronically track and manage complaints through a lifecycle of filing, investigation, mediation, litigation, and closure. Business program areas use Destiny functions for determining case status, assign cases through workflows and triggers, track events and notes, generate documents and letters, upload documents, create alerts, search cases, and run reports.

1.8 Strategic Business Alignment

Strategic Business Goals

Provide fair, accurate, and timely resolution of complaints filed with CDT

Alignment

The CMS will help achieve CDT's goal to provide fair and accurate resolution, and will analyze methods and options to reduce the timeframe for underlying processes. Business problems/opportunities number 1, 2, 3, 4, 5, and 8 align well

| | with this business goal. |
|---------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Create a positive and productive work environment for our employees. | Addressing problems/opportunities 1, 2, 3, 4, 5, and 7 will contribute in achieving this goal of maintaining employees' high morale, positive attitude, and increased work productivity. |
| Increase public's awareness of their rights and responsibilities under the law. | The CMS will provide public with the online access to the case related statistics, laws and regulations, and disseminates information on public's rights and responsibilities. CMS would address problems/opportunities 2,3, 5, 7, and 8 which is in alignment with this business goal. |
| Help foster an environment in California that is free of discrimination. | The CMS System would be able to help foster an environment free of discrimination by addressing 1,2, 3, 5, 6, and 7 business problems/opportunities, thus supporting CDT achieve its mission. |
| Manage our programs in an efficient and effective manner. | With effective communication, keeping employees engaged, and providing them with an efficient system, CMS will address all the problems and opportunities in this proposal. |
| Strategic Plan Last Updated | 7/1/2015 |

1.9 Business Problem or Opportunity Summary

The vendor for the current Case Management System (Destiny) has notified CDT that his company will not renew the contract or provide support at the conclusion of the existing contract, which expires December 2017. The current contract was initially scheduled to expire in June 2016; however, the CDT negotiated with the vendor to extend the support for another year and half so the Department has sufficient time to request funds and procure a new solution. While the vendor agreed to the extension, he has informed us that services may be extended no more than 12 months beyond the December 2017 date.

The CMS is a mission critical application for the Department, and losing it will be catastrophic without a replacement system. Lack of a system would require the CDT to revert to an untenable paper-based process, which would be extremely time consuming, laborious, and ineffective in meeting the needs of CDT constituents and fulfilling the Department's statutory mandate. CDT utilizes Destiny to manage the complaints through its lifecycle of investigation, mediation, litigation, and closure.

CDT implemented Destiny in May 2012 and began to allow online complaint filing by public complainants or their representatives, along with the ability to submit Public Records Act and Right-to-Sue requests. Since its implementation in 2012, CDT has experienced multiple issues with the system including insufficient business functionality, performance, data integrity, vendor support, and reporting. Current vendor is unable to incorporate CDT's critical business functions to make the system efficient and reliable for CDT's business use.

After the conclusion of current contract, continuing without a system would cause tremendous unsound, manual work processing resulting in frustration, inadequate staff performance, low employee morale, and very poor customer service. Lack of system will impact CDT's critical business of enforcing California's civil right laws. By not pursuing this proposal, the Department would need to revert to manual and paper intensive processes which would require significant hiring of more staff. Without an efficient and streamlined automated CMS, CDT will be unable to carry out its statutory mandates in a timely and effective manner.

Security - The current system's interface is not encrypted to ensure that public and internal CDT staff data is being transmitted through a secure encrypted communication channel. There is an opportunity with a new system to implement an end-to-end encryption or approved compensating security control(s) used to protect confidential, sensitive, or personal information that is transmitted or accessed outside the secure internal network (e.g., email, remote access, file transfer, Internet/website communication tools) of the state entity.

Americans with Disabilities Act (ADA) compliance - website accessibility

The ADA (and analogous state law) requires that CDT provide individuals with disabilities equal access to programs, services, and activities. These requirements would be built into the new CMS at the out-set to ensure compliance with the ADA. In the new system, individuals with disabilities would be able to navigate through the interface and file their complaint effortlessly.

ID Problems or Opportunities

2 Reporting/Data Analysis

CDT is legally required to complete cases within specified time periods. The U.S. Equal Employment Opportunity Commission (EEOC) requires CDT to complete all cases within a one year statute of limitations (SOL) and the U.S. Housing and Urban Development (HUD) requires CDT to file a civil action within 100 days from the case filing date. With manual registers and files, it would be enormously difficult to track cases and report on which ones are approaching the SOL by location, case type, or any other basis. Without such reporting capability, investigators would have to manually review each case to determine the SOL.

CDT would be unable to respond quickly to control agency and legislative requests for information. Manually collecting such information would require inordinate staff time. The requested data would have to be manually extracted from logs and other records in multiple offices.

Further, it would be difficult to collect and analyze data on the cases for purposes of improving our internal policies and processes. It would also be difficult to respond to the 300-400 PRA requests the CDT receives each month. CDT would have to manually collect and tediously assemble such data. Staff would also have difficulty retrieving limited data to provide accurate information to meet the mandated reporting requirements of the Equal Employment Opportunity Commission (EEOC), Housing and Urban Development (HUD), and others.

ID Problems or Opportunities

Public Records Act (PRA)

CDT receives approximately 350-400 Public Records Act requests per month. Without a CMS, it would require an enormous amount of resources and staff time for file retrieval, copying, billing, redacting, mailing correspondence, etc., and thus adding huge program costs to process the requests.

Litigation

3

Without a CMS, the CDT Legal division would not be able to efficiently track litigation expenses and the attorneys' activities for attorney fees purposes. This is important because CDT collects legal fees as part of a settlement or judgment in some cases. CDT staff would be using manual logs to calculate attorneys' fees, litigation expenses, and to monitor settlement agreements.

same language as the complainant, further delaying the investigation. Document Uploading: The current system lacks the functionality for the public to upload their case documents directly through the portal. Documents must be sent to the assigned consultant a few at a time and then saved into the system causing unnecessary, time consuming work. External Interfaces: CDT staff must enter complaint information into Destiny and then cut and paste the same information into HUD's federal system. For the other federal partner, the EEOC, CDT staff must input information from scratch. Redundant data entry results in longer processing time and introduce a greater chance of errors and omissions. Obj # Objective 5.1 Within six months after CMS implementation, implement an Appointment system as part of the CMS to schedule 90% of the appointments for the complainants. Measurement Metric Baseline Method Target Number of filings or 900 100 Case Filing reports appointments in the queue Obi # Objective 5.2 Implement a functionality to select a preferred choice of language so complainant can be assigned to the appropriate investigator. Does this proposal share resources (state staff, vendors, consultants or financial) with other

Yes No

1.11.2 External Stakeholder Involvement

Advocates for complainants and respondents use the CDT online system to file complaints, check the status of the complaints, and file PRA requests. CDT has been working with external stakeholders to ensure requirements are clearly articulated to incorporate into the proposed solution. The CDT is required to enter complaint information into U.S. Housing and Urban Development's TEAPOTS system. CDT will work with the federal government to allow importing of data from the proposed solution into the HUD system. CDT will also work with EEOC in determining their interface requirements.

| 1.11.3 New or Changes to Business Processes | Yes | No |

| Does the Agency/state entity anticipate changes to existing business process? | | |
| The high level business processes will not change. | | |
| 1.12 Organizational Readiness | | |

1.12.1 Governance Structure

Does the Agency/state entity have an established governance structure for combined business and IT decision making, including information security and privacy?

CDT has an established governing process comprised of CDT program area executives as steering committee members. The steering committee has an overall responsibility for the business and IT governance. The roles, responsibilities, and performance criteria for the project governance are clearly defined. To attain a specific decision for a project, subject matter experts are assigned to assess and review the issue, and to make a timely decision. Governance decisions are made, recorded, and communicated to all stakeholders. The project will have clearly defined criteria for project status reporting, and for the escalation of risks and issues to the levels required by the Department. The CDT fosters a culture of improvement and of a frank internal disclosure of project information along with the stakeholders who are engaged at a level that is commensurate with their importance to the CDT. CDT ISO is actively involved, and has extensive experience to ensure that the project adheres to security and privacy guidelines, and compliance.

1.12.2 Leadership Participation

1.12.6 Project Management

Project Management Risk Score:

1.12.7 Data Management

1. Does the Agency/state entity have an established data governance body with well-defined roles and responsibilities to support data governance activities?

2. Does the Agency/state entity have data governance policies (e.g., data policies, data standards, etc.) formally defined, documented and implemented?

3. Does the Agency/state entity have data security policies, standards, controls, and procedures formally defined, documented and implemented?

The CDT has completed data governance plan and is now in the process of building a detailed data classification table with its respective owners for each data type. This will assist in making decisions on data governance activities. CDT is working on building a complete portfolio of data assets and data strategy. The CDT Information Security Office is in the process of building Data Quality Management components and related artifacts. The CDT implemented security policies and procedures that provide for proper authentication, authorization, and access to data and information. By defining policies, processes, and standards necessary to support the CMS project, the decision framework will be established to drive data management decisions. Department assumes complete responsibility of expanding the data management decision rights, updated policies, processes, and standards department wide.
